

UNESCO Chair in Science Education with Emphasis on Natural Sciences at Belarusian State University

UNESCO Chair in Science Education with Emphasis on Natural Sciences at Belarusian State University was setting up in 2011.

The specific objective of the Chair is producing expertly trained professionals in research in chemistry, physics, biology and environmental sciences with international experience and skills in holding scientific and methodological research. UNESCO Chair has close scientific and educational links with institutions of the National Academy of Sciences of Belarus that provides training of students in specialized scientific courses with use of modern equipment for scientific research.

Diversity of specific methods of students' training comprises different approaches:

- elaboration of special educational programs to train specialists in natural science
- holding regular training courses for young pedagogues aimed at raising ecological awareness of young pedagogues with an ultimate objective of facilitating the education for sustainable development
- organizing of regular Olympiad movement in natural sciences for scholars concerned the purposes of the UNESCO World Network of Biosphere Reserves
- organizing special forums for educators, students and other groups of local population as "environmental schools" – including knowledge on protection and use of water resources, biological and landscape diversity, climate change, and also natural resources and climate change interaction.
